

# Sinus, cosinus og tangens i RETVINKLEDE trekanter

## Navne i trekanten

- Siden a er den modstående katete til A (modstående = siden overfor)
- Siden b er den hosliggende katete til A (hosliggende = ligger hos/ved)
- Siden c kan også kaldes  $\overline{AB}$ , fordi vinklerne A og B ligger for hver ende.

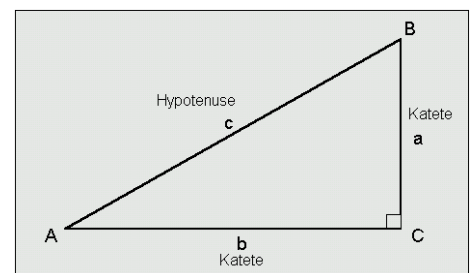

**Sinus** (gælder kun for de spidse vinkler):

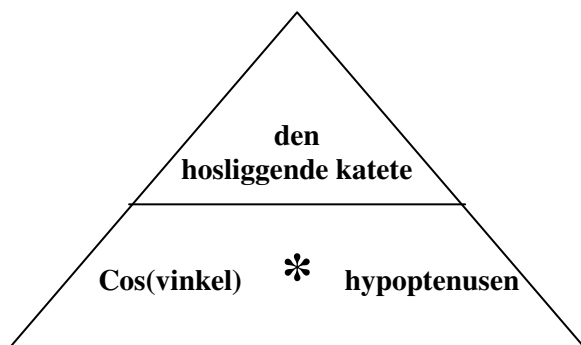

Eksempel:

$$\sin(A) = \frac{a}{c}$$

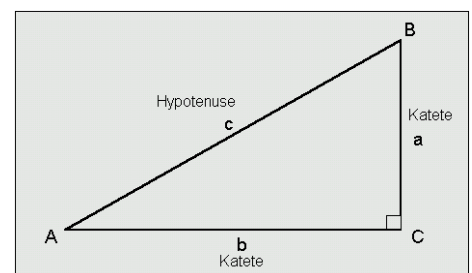

**Cosinus** (gælder kun for de spidse vinkler):

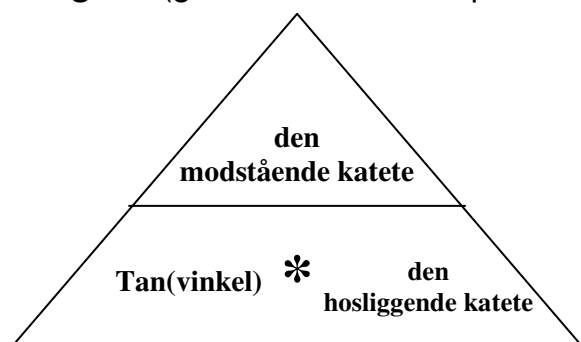

Eksempel:

$$\cos(A) = \frac{b}{c}$$

**Tangens** (gælder kun for de spidse vinkler):

Eksempel:

$$\tan(A) = \frac{a}{b}$$
